- ドキュメントがかわいい(最重要)

Prettier

7/6

Prettier v3 Released!

- ESM 化 !! (待ってた)
- 日本語文中に英単語があるとき、その左右に半角スペースが入るのって仕様じゃなかったみたい
 - v3 で撤廃
 - 手入力のときにスペースいれる癖ついちゃったん だけどどうしてくれるんだ

Prettier 3.0: Hello, ECMAScript Modules!

July 5, 2023 Sosuke Suzuki (@sosukesuzuki)

We are excited to announce the release of the new version of Prettier!

We have made the migration to using ECMAScript Modules for all our source code. This change significantly improved the development experience for the Prettier team. Please rest assured that Prettier as a library, you can still use it as CommonJS as well.

This update comes with several breaking changes. One notable example is the alteration in mark formatting - spaces are no longer inserted between Latin characters and Chinese or Japanese characters. We would like to extend our gratitude to [Tatsunori Uchino](#), who has made significant contributions to Prettier over the past year, particularly with this feature. Additionally, the default value of `trailingComma` has been changed from "none" to "all".

Another important change in this release is the significant overhaul of the plugin interface. Prettier now supports plugins written using ECMAScript Modules and async parsers. If you're a plugin developer, please exercise caution while updating. You can find [the migration guide](#) here. As always, we welcome bug reports and feedback!

This release also includes numerous formatting improvements and bug fixes.

If you appreciate Prettier and would like to support our work, please consider sponsoring us directly on [OpenCollective](#) or by sponsoring the projects we depend on, such as [typescript-eslint](#), [remark](#), and [prettier-plugin-searchreplace](#). Thank you for your continued support!

Kuma

7 / 10

Kuma UI v1 Released!

- CSS framework
 - for React Server Component
 - Hybrid CSS-In-JS
 - Build Time Generate / Less Runtime Generate
 - Type-Safe
 - Variant Supported
 - Design Token Supported
 - React only
- アイコンがかわいい(最重要)

The screenshot shows the Kuma UI website homepage. At the top right, there are navigation links for "Home" and "Documentation". The main heading is "Empower Your Web with Performance and Flexibility". Below it, a sub-headline reads: "With Kuma UI's headless, zero-runtime UI components, build top-performing websites while enjoying the best developer experience. Say hello to the future of web development." A "Get Started" button is located on the right. The page then lists four main features with corresponding icons:

- Zero-runtime**: Delivers blazing-fast websites with zero-runtime CSS extraction.
- Autocomplete**: Offers seamless development with style autocompletion.
- Hybrid Approach**: Supports the best of both worlds—any writing style via hybrid approach.
- RSC Support**: Keeps users updated with cutting-edge Next.js technology via RSC support.

Panda vs Kuma

Panda CSS

- Zero-runtime CSS-in-JS
 - 動的スタイリング不可能
 - コンポーネントライブラリを排出可能
- 対応フレームワーク多数
- ドキュメントがかわいい

Kuma UI

- Hybrid CSS-in-JS
 - 動的スタイリング可能
 - 静的部分だけビルト時にCSSとして出力
- React 限定
- アイコンがかわいい

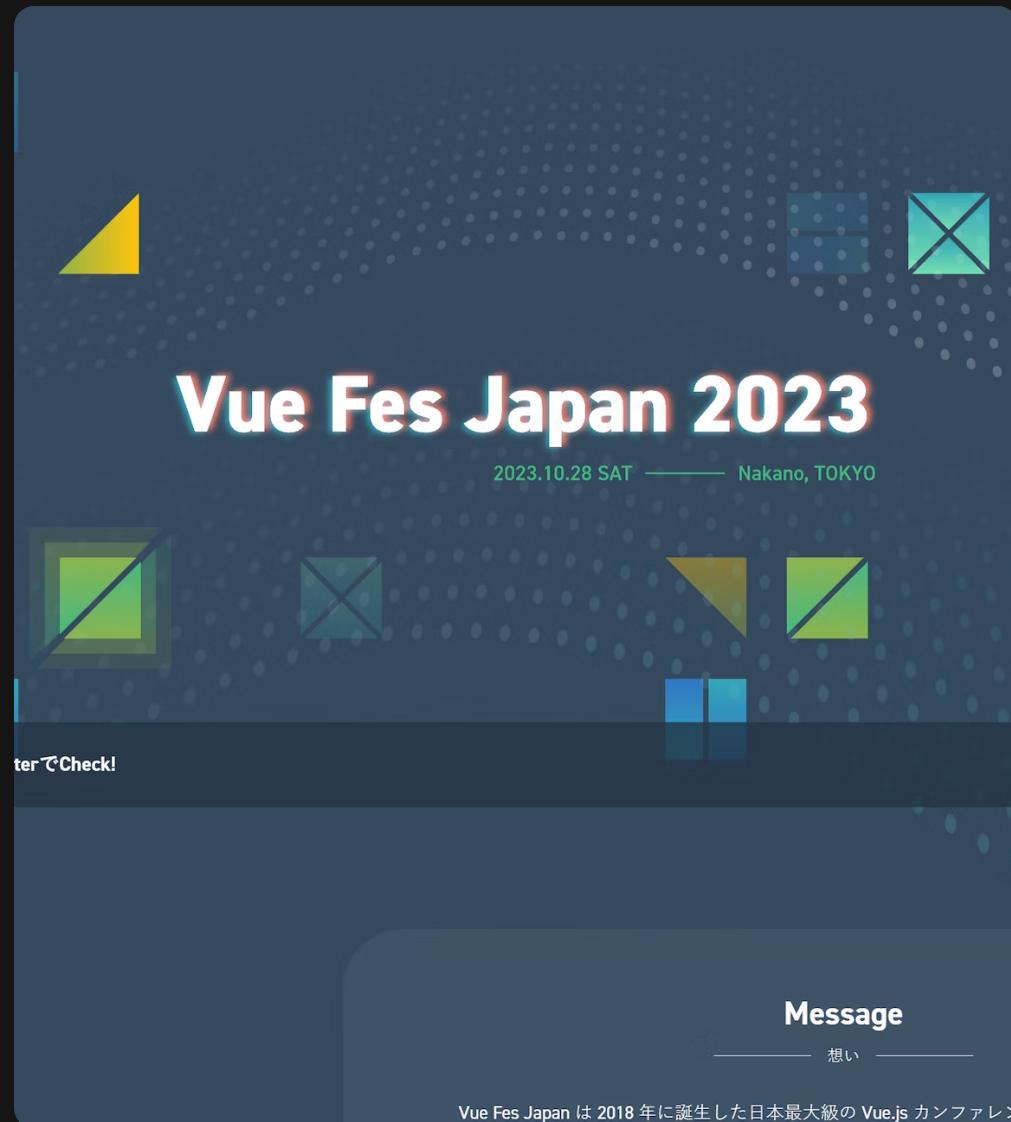

Vue.js
